SQL2BTR.EXE FOR CREATING SEGMENTED KEYS

SQL2BTR.EXE should be downloaded and unzipped to the root directory of either \MACOLA or \Elliott where the COBOL Run Time files and additional library files reside. SQL2BTR.EXE will look for the following COBOL Run Time libraries, COBLIB.DLE and COBENV.DLE. If the program is run in any other directory, where the Run Time files are not installed, then the following error message will be displayed "COBOL Run Time Library is not installed".

For example, if the following is typed at the command prompt
              SQL2BTR DATA_02
where DATA_02 is the sub directory of \MACOLA that you wish to convert, then SQL2BTR.EXE must reside in the directory \MACOLA\DATA_02. Additionally, you will need to have the Data Dictionary Files in the \MACOLA\DATA_02 directory as well.

NOTE: Before SQL2BTR.EXE can be run, btrieve must be loaded.   To load btrieve
         type the BLOAD.BAT command at the \MACOLA root directory.
